

8 Inch Model 380/381 Control Valves

Technical Sales Bulletin

Figure 1 Model 380 Control Valve with DFC Actuator

The Dyna-Flo 380 series of valves are heavy duty cage guided globe style control valves designed for high pressure applications. These valves are used in all kinds of demanding applications, including oil and gas production and chemical process.

Both Models 380 and 381 are cage guided control valves with balanced plugs. Model 380 control valves are capable of Class V shutoff at process temperatures below 450°F (232°C). Model 381 control valves are designed for high temperature / high pressure applications and are well suited for general applications that do not require tight shutoff.

A bolted bonnet is standard and a typical actuator is a Dyna-Flo Model DFC, DFO, or DFLP linear actuators.

Features

High Quality Construction

Dyna-Flo uses only materials that have been proven to provide superior, trouble free performance. All materials comply with ASME and ASTM specifications.

Versatility

A wide range of trim options including Low Noise and Anti-Cavitation make the 380 a highly versatile control valve.

Field Service Friendly

No special tools are required to change or inspect trim. Top access makes in-line service easy.

Highly Durable Design

Unique trim design features of the 380 series are well suited to applications where thermal expansion is a factor, such as temperature cycling applications. These design features also allow for superior performance in a variety of demanding applications.

High Flow Capacity

Offset flow chamber and specially designed flow cavities allow for increased capacity.

Sour Gas Service Capability

The 380 Series can be constructed out of materials that comply with the recommendations of the National Association of Corrosion Engineers (NACE) MR-0175.

Shut Off Classification

Seat leakage options range from ANSI/FCI 70.2 and IEC 60534-4 Class IV to Class V for the 380. 381 is capable of Class III and IV shut off.

8 Inch Model 380/381 Control Valves

Technical Sales Bulletin

SPECIFICATIONS

Configurations

Refer to Table 1.

Consult your Dyna-Flo sales office for other available configurations.

Sizes and End Connection Styles

Models 380 & 381
Size: 8"
Rating: ASME 900 & 1500
Connections: RF / RTJ / BWE

Maximum Inlet Temperatures and Pressures

In accordance with ASME B16.34 Class 1500 unless limited by material selection shown in Tables 4 to 6, and Figure 9 of this bulletin.

Maximum Pressure Drops

Same as maximum inlet pressure unless limited by specific trim construction. For valve assembly shut off pressure drops refer to Table 8 and Figure 9.

Shutoff Classifications

Refer to Table 1.

Dimensions

Valve Dimensions
Refer to Table 3 and Figure 2.

Approximate Valve Body Weights

Refer to Table 2.

Valve Body to Bonnet Bolting

Refer to Table 5.

Characteristics

- Equal Percentage (Standard)
- Modified Equal Percentage
- Linear
- Contact factory for Low-Noise and Anti-Cavitation options.

Flow Direction

Flow down through seat ring except when using Low-Noise trim.

Packing Type and Examples

The standard packing is PTFE V-Ring. Live loaded low emission, graphite and other packing arrangements are also available. Refer to Figure 8.

Flow Coefficients

For standard coefficients at maximum travel, refer to Table 7. For full list of coefficients refer to document P-CVSM.

Valve Travel

Refer to Table 7.

Trim Materials

Refer to Table 6.

Materials

Body and bonnet material options include:

LCC (A350-LF2 optional* bonnet material)

WCC (A350-LF2 optional* bonnet material)

CF8M (A182-F316 optional* bonnet material)

***NOTE:** Dyna-Flo reserves the right to substitute a cast material with the forged bar equivalent in the event a casting is not available.

Refer to Figure 8. Refer to Tables 4 & 5 for typical construction materials. Refer to Table 8 for trim selections.

For more information and other options contact your Dyna-Flo sales office.

NOTES:

- 1 - NLF - This Material is Not A Limiting Factor. For the temperature limitation refer to the valve body material temperature limit.
- 2 - Standard option, not for water or steam service. Fluoroelastomer is limited to 300°F (149°C) when used for NACE.
- 3 - Oxidizing service limited to 700°F (371°C).
- 4 - Oxidizing service limited to 1000°F (538°C).

Table 5

Body to Bonnet Bolting Temperature Limitations

Table 6

Common Trim Options and Temperature Ratings

Trim Spec ⁽²⁾	Valve Plug	Stem	Cage	Seat Ring	Minimum ⁽¹⁾ Temperature	Maximum ⁽¹⁾ Temperature
					°F (°C)	°F (°C)
S	S41600 HT	S20910	S17400 H900	S41600 HT	-20 (-29)	800 (427)
N	S31600 ⁽³⁾ / Alloy 6 Seat and Guide	S20910	S17400 DH1150	S31600 ⁽³⁾ / Alloy 6	-50 (-46)	450 (232)
C	S31600 ⁽³⁾ / Alloy 6 Seat and Guide	S20910	S31600 ⁽³⁾ ENC	S31600 ⁽³⁾ / Alloy 6	-325 (-46)	650 (343)

1 - Temperatures need to be considered when specifying trim materials for elevated temperatures in corrosive environments, consult factory for further information.

2 - Trim Specification relates to Model Numbering System on Page 12.

3 - All S31600 barstock is dual grade S31600/S31603 (316/316L).
